

Zero-G Star Search

Twenty stars, constellations, heavenly bodies, and miscellaneous spacy words of four or more letters are hidden in the grid below. Words may go horizontally, vertically, or diagonally. In addition, whether they are upside-down or rightside-up depends on which end of the page you look from. Any letter could have different ends up in different words, but all letters in any found word will point the same way.

Four letters will not be used. Those letters, read from top to bottom, spell your answer word. It would be prudent if you would cross letters out lightly instead of circling whole words.
