

Scrabble Chess

by Craig Kasper (Gabby)

Consider a 5x6 grid (or 6x5, orientation doesn't matter). The objective is to make four sequential Scrabble-style plays within the grid. The first word can go anywhere, and subsequent words have to interlock in the usual fashion. *Each turn must produce the name of a different chess piece: ROOK, KNIGHT, BISHOP, QUEEN, KING, or PAWN.* How do you do it?
